

Thinking evaluatively about social issues

The developmental context of
M&E

Mark A Abrahams – August 2015

Outline of presentation

- Declaration
- What is evaluative thinking?
- The development context for evaluation
- Examples of evaluations in contexts
- D.A.R.E. ; Community College
- Capacity building/ training
- Barriers; Available Sources
- What to look for ... Evaluative thinking

Evaluation without Evaluative thinking

What is evaluative thinking?

- Is an activity involving the posing of questions of substance and determining what data are needed to address the questions ...
- Evaluative thinking is a type of systematic reflective practice aimed at improving performance. It involves: identifying assumptions; posing thoughtful questions; pursuing deeper understanding through evidence gathering, reflection and perspective taking; and making informed decisions in preparation for action.

Four Guiding Principles:

- Evaluative thinking is not a born-in skill; it must be intentionally practiced, and does not depend on a certain educational background (*Brookfield, 2012; Ericsson, 1994; Perkins, 1986*)
- Evaluative thinking must be applied and practiced in multiple contexts alongside peers and colleagues (*Bransford et. al., 1999; Brookfield, 2012; Halpern, 1998; Simon 1996*)
- Evaluative thinkers must be aware of—and work to overcome—assumptions and belief preservation (*Brookfield, 2012; Lord et. al., 1979*)
- Learning to think evaluatively (and practicing ET) must be intrinsically motivated and experienced incrementally (*Bransford et.al., 1999; Brookfield, 2012; Piaget, 1978; Vygotsky, 1978*)

The developmental context

Evaluative thinking

Existing problem/ condition

Brainstorm and objectives setting

Input

OTHER RESULTS

Problem → Outcome → Impact

ADDING UP THE COST OF DEVELOPMENT

Lack of / limited / unsatisfactory results

Not sustainable

Too expensive

Growth in problems

Different questions being posed

How do we ensure maximum impact for minimum buck?

ACCOUNTABILITY

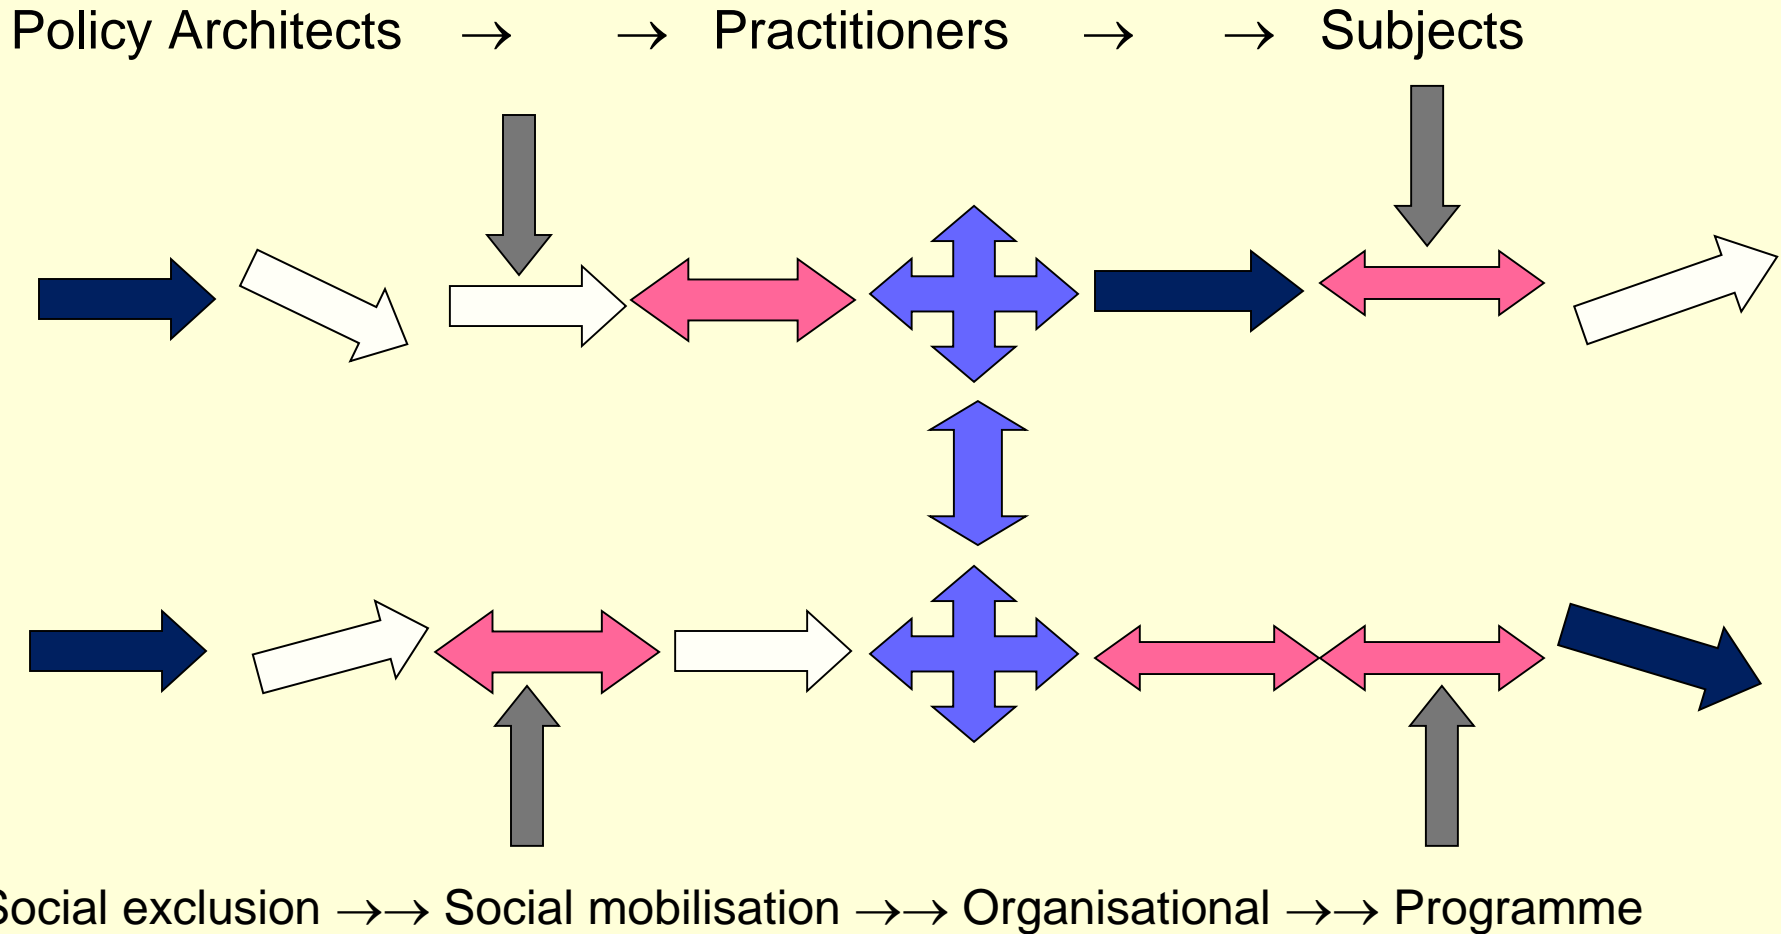

How do we make sure that we are implementing appropriate strategies?

RESPONSIVENESS

COMPLEXITY

Problem solving - The Implementation Chain

Examples of evaluations in contexts

- D.A.R.E. (US programme – Drug Abuse and Resistance Education)
- Established in Los Angeles in 1983.
- 75% of Schools across America
- Thirty-five million school children worldwide.
- In the US, \$700 million per annum – over \$2 Billion worldwide.
- Law, education and welfare
- ‘Just say no’ ... ‘Keeping it real’

D.A.R.E. Evaluation Results

- 30 + Evaluations
- No significant effects
- Increased roll-out over the years
- Change in strategies – pedagogies
- Questions about funding use
- Decrease in funding
- Slow down
- Benefits?

Community college

- Community college building
- Needs assessment
- Desired skills: farming and construction
- Capacity building – survey construction
- Pilot study findings
- New strategy, new questions, focus groups
- Pre-school and craft training centre.

Some Barriers to Evaluative thinking

- Lack of background information
- Either-or thinking
- Egocentrism (self-centered thinking)
- Sociocentrism or ethnocentrism (group/society/cultural-centered thinking)
- Inappropriate bias
- Reliance on main stream television, newspapers and other media for information.

Capacity building/ training (King et al)

- Professional practice competencies
- Systematic inquiry competencies
- Situational analysis competencies
- Project management competencies
- Reflective practice competencies
- Interpersonal competencies

Let me state what I look for ...: (Smith, 1994, p. 42)

- a sense that the evaluator was present over a long enough period and close enough to the action and to the participants' meanings;
- informed by some system of theoretical ideas about the social and educational substance of the program;
- adept at the ethical, political and personal relationships that qualitative methods make inevitable;
- successful in sampling widely with multitude indicators and methods; adept at forms of representation;
- oriented toward challenging standard hypotheses and assumptions;

I look for ...

- self-critical and amenable to the scrutiny of the field, peers, participants, and stakeholders;
- and able to penetrate to an understanding of the matters at hand.
- **(Smith, 1994, p. 42)**

THANK YOU
